Children's play is not only entertaining, it also has a fundamental role in their development. Skills such as affection, motor skills, intelligence, creativity and sociability are activated and stimulated the moment the child plays.
What happens in the brain while children play

The first years of life are amazing! Toddlers start talking, walking and developing in all areas at once. The brain grows at a faster rate, and through play, children learn not only about the world, but also about themselves.

6 ideas for outside play with babies

There is no better place than the outdoors for joyful learning. It might take a little more planning and effort, but bringing babies outside every day is worth it. It's where they thrive!
